Juan Tomás Martínez

University Technician in Systems Programming with experience in software solution development, process automation, and functional analysis in productive environments.

I have worked on the design and implementation of solutions across various industries. I have experience interacting with clients, gathering requirements, and translating business needs into scalable technical solutions. I am interested in software development roles where I can continue deepening my programming skills and building robust solutions while maintaining a strong focus on product quality and technical excellence.

EDUCACIÓN

■ UNIVERSITY TECHNICIAN DEGREE IN SYSTEMS PROGRAMMING
2023-2024

EXPERIENCIA

■ AEROTERRA April 2025 - present

Functional IT Analyst

Requirement gathering and analysis for software projects. Participated in the design of information flows and data models. Collaborated on asset maintenance and emergency management projects, contributing to the design of applications and dashboards, while strengthening analytical, communication, and continuous improvement skills.

Solutions Engineer

Designed end-to-end technical solutions, acting as the primary technical point of contact. My role involved understanding business needs, analyzing existing systems and data, and translating requirements into scalable technical solutions. Participated actively in defining solution architectures, integrating and normalizing data from multiple sources, and developing the proposed solutions. This role strengthened my skills in analysis, technical design, client communication, and delivering real business value through software.

Technical Support Analyst

Provided technical support for business applications, focusing on incident analysis and resolution. Worked with ticketing systems, problem diagnosis at infrastructure level, and understanding client-server architectures in production environments. This experience strengthened my troubleshooting and complex systems analysis skills.
